Schoolwide Hall Pass Management

Blocksi's Digital Hall Pass is a smarter, safer, and more efficient way to manage student movement across campus. **Built directly into the Blocksi platform**, it gives teachers time back, provides admins with real-time visibility, and helps students move safely and responsibly throughout the school day.

- Student-, Teacher-, and Admin/Delegate-Initiated Passes
- Flexible Rule Settings (location capacity & duration limits, student pass limits, exemptions)
- Admin Insights & Activity Trends

Behavior Insights That Help

Admins can track trends, flag overdue passes, review violations, and identify students who may need support, not discipline. It's visibility that improves accountability and reduces hallway chaos.

- Track **patterns**, like **chronic class avoidance**, **meetups**, and **hallway wandering**, and get data for early intervention.

Reduce Mischief and Meetups with Blocks! Smart Hallway Management

More Time for Teaching: Blocks! automates the entire process so passes are created, approved, and monitored in seconds — without stopping the lesson.

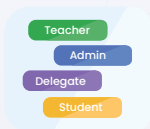

Real Visibility: Staff can instantly see who's out, where they're headed, and for how long. Patterns like repeat absences or meetups become easy to spot and address.

Safer Campuses: Active-pass dashboards and automated rules help schools monitor movement and react quickly during incidents or emergencies.

Helpful Behavior Insights: Trends, violations, and overdue passes give admins clearer data for school-wide behavior support and early intervention.

Multi-level approval, automatic rule enforcement, school- and district-wide rule scoping, and lockdown override mean the system functions the way schools actually operate.

We have been using Blocks! for a few years now, and it has become an invaluable tool for classroom management and monitoring student devices. It has become one of our fundamental programs for all teachers in our district.
