BIX FOR SCHOOLS

Blocksi's Bix: AI Chatbot for K-12 Schools

AI that encourages curiosity, within guardrails your district sets.

General-purpose **AI chatbots** weren't built for K-12 classrooms, so we built one that is. **Bix** is Blocksi's **AI chatbot** for schoolwork, built to encourage curiosity and critical thinking. It works within the guardrails your district sets, and if a conversation is flagged, admins can see the whole exchange exactly as the student saw it.

Bix works in two parts: guardrails that shape every conversation, and the oversight schools rely on when something needs a closer look.

Guardrails

- **Always-on core safety:** Core safety protection stays on for harmful content and sensitive situations such as violence, self-harm, bullying and mental health concerns.
- **Guardrails your district sets:** Admins add limits on sensitive and controversial topics, regulated advice, academic integrity and off-task use.
- **Academic integrity:** Admins can turn it on to block homework completion and test answers, so **Bix** tutors the Socratic way: it guides students with questions instead of handing over answers.

Alerts and records

- **Safety alerts in class:** When a chat is flagged, a warning appears on the student's tile in the **Teacher Dashboard**, with a short summary and category tags.
- **Full transcripts:** Admins and counselors can open a flagged conversation and see what the student saw: the full answer, a blocked response or a retracted one.
- **Review in one place:** Filter by flagged or unreviewed, search, mark reviewed and export a PDF.
- **Student overview:** Sessions, messages, blocked and flagged responses and alerts for each student, what they ask about by subject, and how their message and flag counts compare with their year-group average.
- **Audit trail:** Admins see a log of every time staff open, review or export a student's chat.
- **Scoped access:** Staff see only the students within their access scope.

How Bix works for students, teachers and admins

Students

- Help with schoolwork across subjects
- Opens in a new tab from the Blocksi floating button
- Suggested prompts by subject
- Saved chats they can rename and pin
- A Socratic approach that guides them to answers instead of handing them over

Teachers

- Turn **Bix** on or off for the class
- Guardrails handled by district admins, so teachers can focus on class
- Alerts on the student's tile when a chat is flagged
- Alert summaries with category tags
- See the flagged messages behind each alert

Admins & Counselors

- Customizable guardrails for your district
- Review **Bix** analytics and messages for each student in Student Monitoring
- Flagged conversations with full transcripts
- Review status and PDF export
- An Audit Trail of every open, review and export

Guardrails your district can add

Core safety is always on, so **Bix** is ready to use without any guardrail setup. On top of it, admins can add limits in four areas:

Sensitive and controversial topics: like politics or religion

Regulated advice: like medical or legal questions

Academic integrity: Socratic tutoring instead of finished answers

Off-task use: like gaming or celebrity talk

Data and privacy

Bix runs within the Blocksi platform and follows Blocksi's data handling practices. Student conversations in Bix aren't used to train AI models, and students' names and other personal details aren't sent to the AI model. Conversations stay available for review for 30 days, then move to cold storage. Staff see only the students within their access scope, and every time they open, review or export a chat, it's logged in the Audit Trail.
